October 17, 2014 – Boston, MA

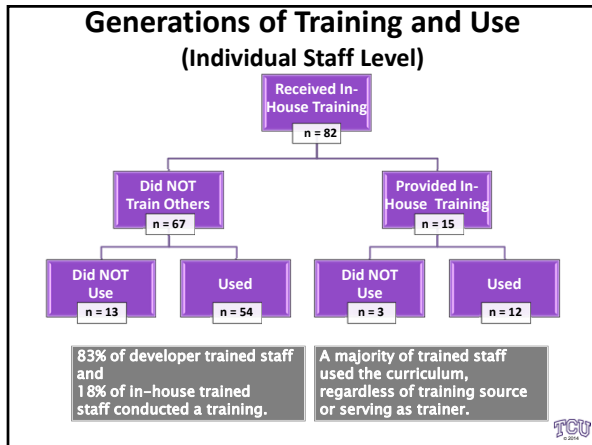

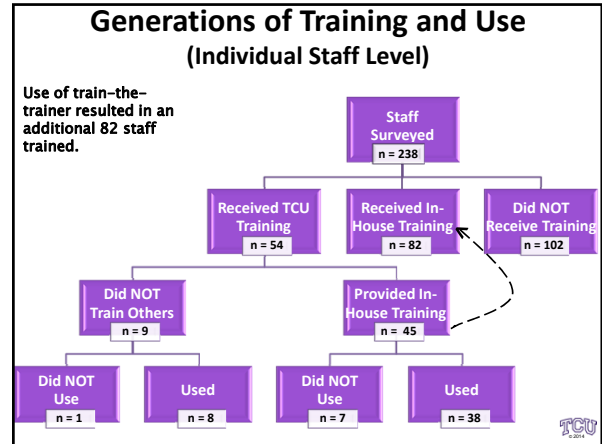

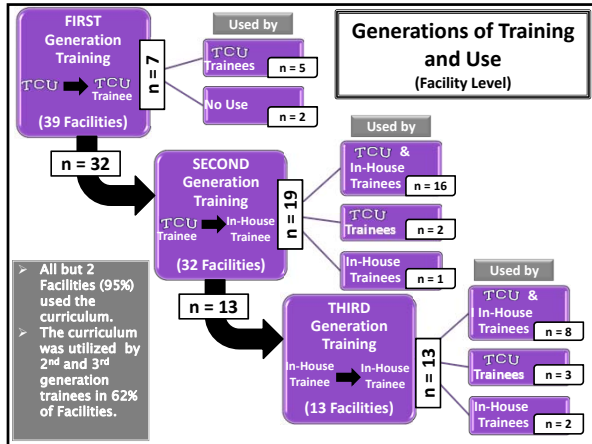

This study was funded by a grant to Texas Christian University (R01DA013093). The content is solely the responsibility of the authors and does not necessarily represent the official views of the National Institute on Drug Abuse or the National Institutes of Health.

Question 1

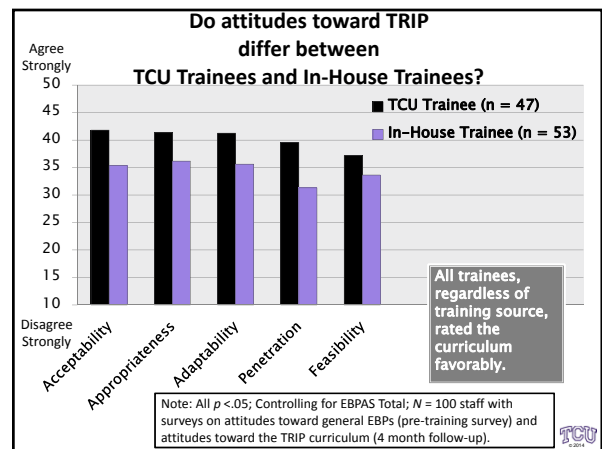

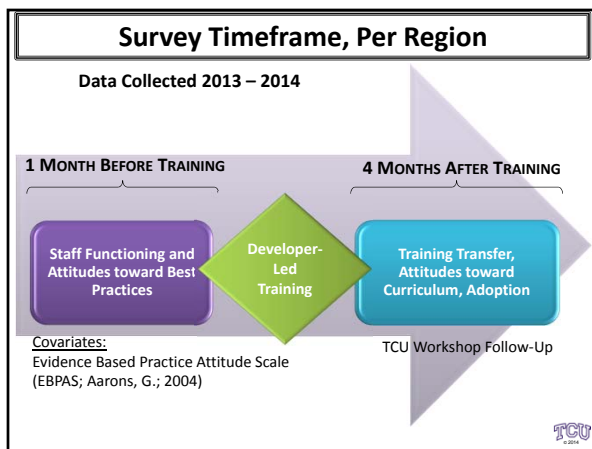

What is the level of internal dissemination and facility use within the 39 facilities at 4-months following a developer-led training?

Question 2

Does the source of training (*developer-led versus in-house*) relate to staff member attitudes toward use of the new practice?

Conclusions

- ▶ A train-the-trainer model facilitates internal dissemination of new evidence-based practices within treatment programs.
- ▶ Attitudes toward TRIP as a new practice is perceived favorably by staff, regardless of training source (developer-led training vs. training in-house).

Future Directions

- ▶ Is there variation in internal dissemination based on program modality? Client mix? Caseload? Staffing?
- ▶ Does internal dissemination act as a facilitator to widespread adoption? Act as a buffer to effects of turnover? Serve as a facilitator of positive attitudes toward new practices?
