

## “There’s an app for that”

### A novel tool to help community correction populations learn strategies to decrease HIV risk behaviors after release

Julie S. Gray  
 Jennifer Pankow  
 Wayne E. K. Lehman  
 Grace A. Rowan  
 Kevin Knight

Addiction Health Services Research Conference, October 17, 2014

Funding for this study was provided by the National Institute on Drug Abuse, National Institutes of Health (NIDA/NIH) through a grant to Texas Christian University (R01DA025885; Wayne E. K. Lehman, Principal Investigator). Interpretations and conclusions in this paper are entirely those of the authors and do not necessarily reflect the position of NIDA/NIH or the Department of Health and Human Services.

### Background:

#### Computer apps for treatment settings

- **Computerized interventions have demonstrated promising findings**
  - ✓ Substance abuse treatment
  - ✓ HIV and public health education
  - ✓ Reentry -Motivational Assessment Program to Initiate Treatment
- **Similar or more efficacious results**
  - ✓ Adding a browser-driven HIV intervention to traditional counselor-led treatment session enhanced outcomes compared to traditional alone for youth with SUD
  - ✓ Promising CDC pilot of comic book-based app about HIV “There is something I need to tell you” Public debut planned for late 2014

Bickel et al., 2011; Marsch et al., 2011; Wahowiak, 2014; Walters et al., 2014

### Background:

#### TCU Guide Maps

Dancereau & Dees, 2002; Cruchley & Dancereau, 2003

### About STAYSAFE

### About STAYSAFE

What is the problem? → Who will be affected by your choice?  
 → Who can help you w/ the decision?

Think about your **Options**  
 Rate your options  
 Know what decision to make  
 Imagine the steps to turn your choice into action  
 Time to test for results

### Challenge:

#### Adapt WORKIT for STAYSAFE

FROM “in-person” mapping with a counselor (individually or in group)  
 TO self-administered computer tablet app

THEORETICAL CONSIDERATIONS	RELEVANCE FOR TABLET APP DEVELOPMENT
Dual Coding	<ul style="list-style-type: none"> <li>• Use words and pictures</li> <li>• Make connections - visual and audio</li> </ul>
Cognitive Load	<ul style="list-style-type: none"> <li>• Maximize visibility of text and graphics</li> <li>• Contiguity of words near graphics</li> <li>• “Brain-friendly” content structure</li> </ul>
Active Processing	<ul style="list-style-type: none"> <li>• SOI - selecting, organizing, integrating</li> <li>• Personalize materials - “this program is about...” vs. “You are about to start ...”</li> </ul>

Mayer, R. E. (2005). Cognitive theory of multimedia learning. *The Cambridge handbook of multimedia learning*, 31-48.

## STAYSAFE app development

**Initial Decisions**

**App development**

- Platform decisions - operating system? laptop or tablet?
- Input decisions - keyboard? audio input? touchscreen?
- Walk-throughs - know limitations imposed by setting
- Sustainability - need “back office” for content Δ’s

**Data export**

- choices participants make during session (menu themes, menu problems, problem options)
- satisfaction questions (session helped me work through my problems, session kept my attention)
- struggle indices (hand gestures to enlarge visible display areas)

**Data import** - Sustainability – need “back office” for content Δs

7 **DRR<sub>2</sub>**

## STAYSAFE app development (cont.)

**Mapping adaptations**

**Story boards** - present a visual of WORKIT elements

**Overlays** - plan individual elements in layers

- audio voiceover
- video script
- problem themes, problems, lists of options

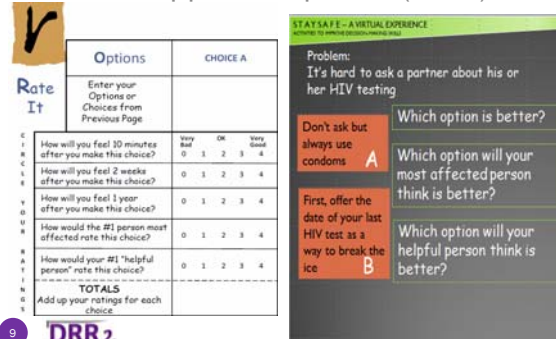

**Similar structure** - 8 sessions use a standard template

**Menu of problems** (HIV/SUD risk themes)

**Guided WORKIT process** for each problem (different video, text, & audio)

8 **DRR<sub>2</sub>**

**Problem:** It's hard to ask a partner about his or her HIV testing

**Don't ask but always use condoms** (A)

**First, offer the date of your last HIV test as a way to break the ice** (B)

9 **DRR<sub>2</sub>**

## STAYSAFE app development (cont.)

**MENU**

- People
- Places
- Things

**Menu-driven**

- People (practicing safe sex, getting tested)
- Places (friends want to meet at a bar but being around alcohol is a trigger for you)
- Things (too many things to do and this causes you stress. Stress puts you at risk for relapse)

**Format of each Session**

- Pick a problem
- Watch video - verbalized by someone else
- Choose best option of someone else's choices
- Use WORKIT yourself
- Recap (“speed round” game-like format)

10 **DRR<sub>2</sub>**

## Summary

**Simple** - adapts mapping EBP for tech-driven use

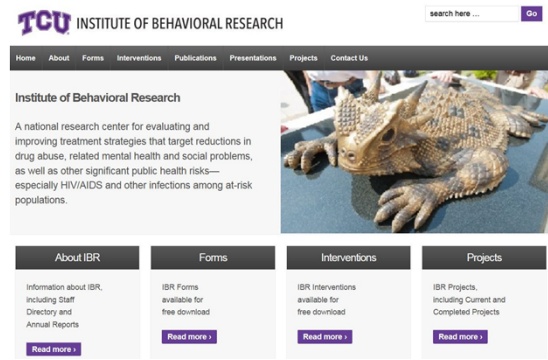

**Engaging** - vicarious learning (watch someone else solve a problem and then weigh in on their choice)

- virtual learning (imagine the steps you'd take to solve a your problem)
- game-like elements
- menu of relevant personal problems

**Reinforcing** - practice the WORKIT process 8 times

**Sustainable** - developed after gathering input from clinical and community corrections
